

Soil Respiration

Video Notes

- Two components of the soil system that respire are:
- Factors you must consider when choosing measurement locations:
- Parts of the instrument:
 -
 -
 -
 -
 -
- What two features of the chamber help control the environment so that an accurate reading is made?
- What is actually being measured by the instrument?
- Two additional site characteristics must be measured to accompany these data:
 - 1.
 - 2.
- What sort of data is generated? What are some big-picture applications for these sorts of measurements?
